

# Prodigy™ HDLV™ Manual Gun System

*HDLV technology precisely dispenses powder coating for superior finish quality, less waste, and fast color changes.*

Prodigy HDLV (high density powder low volume air) technology is all about higher transfer efficiency, higher powder output, and ultra-fast color change.

The Prodigy HDLV manual gun system is an integrated solution for precision dispensing with high density powder low volume air technology. HDLV pumps use less compressed air to propel powder to the gun, and therefore less air velocity. This results in less overspray, more powder on the part, higher first pass transfer efficiency, and greater powder material savings. The controller features a Color Change initiation button to facilitate ultra-fast color change.

## Features of Precision Dispensing with Prodigy HDLV Manual Gun System

- Less air in transport line provides lower powder velocity and softer spray
- Softer spray at gun tip provides higher first pass transfer efficiency
- Higher first pass transfer efficiency means greater powder savings
- Softer spray with more powder means better coverage in cavities and corners
- Paints faster at high line speeds with higher powder output
- Sprays metallic powders more uniformly with softer spray and less air
- Purgeable design provides ultra-fast color change

## Prodigy Manual Powder Spray Gun and Controller

- Auxiliary high-low flow adjustment trigger
- Innovative HDLV conicle and flat spray nozzle technology
- 10 user configurable presets

## Prodigy HDLV Pump

- Purgeable in both directions – suction and delivery
- See-through design for quick, easy diagnostics
- No moving parts or seals to service or replace
